

Sample Job Description: Software Engineering Intern

Position: Software Engineering Intern

Employment Type: Summer Internship

Schedule: Full-time, approximately 40 hours per week

Duration: Approximately 8–10 weeks

Role Overview

We are seeking a Software Engineering Intern who is interested in gaining hands-on experience developing technology solutions in a collaborative team environment.

The intern will work alongside software engineers and other technology professionals on meaningful projects while gaining exposure to the software development lifecycle. This opportunity is designed for a student who is eager to learn, enjoys solving problems, and can apply technical knowledge to real-world challenges.

What You'll Do

Contribute to the design, development, testing, or improvement of software applications.

Work collaboratively with software engineers and other team members.

Participate in team discussions, technical reviews, and problem-solving activities.

Learn and apply development tools, technologies, and engineering practices.

Communicate progress, questions, challenges, and potential solutions.

Receive feedback and mentoring from experienced technology professionals.

Present or demonstrate project work and outcomes at the conclusion of the internship.

Basic Qualifications

Candidates should:

Be currently pursuing a degree in Computer Science, Software Engineering, Computer Engineering, or a related technical field.

Have experience with at least one programming language through coursework, personal projects, employment, or other hands-on experience.

Demonstrate a basic understanding of software development concepts.

Be able to communicate ideas and technical concepts effectively

Be comfortable working collaboratively with others.

Demonstrate problem-solving ability and a willingness to learn.

Experiences That May Demonstrate Alignment

Relevant experience does not have to come from previous employment. Candidates may demonstrate their skills and potential through:

Academic projects or coursework

Personal software projects

Hackathons or coding competitions

Technical clubs or organizations

Open-source contributions

Previous internships or employment

Research or capstone projects

Leadership or team-based experiences

Qualities We Value

Successful candidates may demonstrate:

Learning Ability — Curiosity and the ability to learn new concepts, tools, and technologies.

Problem Solving — The ability to understand a problem, think through possible approaches, and work toward a solution.

Communication — The ability to explain ideas, ask useful questions, listen, and communicate effectively with others.

Collaboration — The ability to contribute as part of a team and work effectively with people with different skills and perspectives.

Initiative — A willingness to take ownership, seek answers, and make progress without requiring constant direction.

Technical Foundation — Evidence of foundational programming and software development knowledge appropriate for a student-level opportunity.

Important Context for Talent IQ

For this capstone, assume that the Software Engineering Intern position described above is the role for which candidates are being considered.

Talent IQ should help recruiters review candidate information in relation to the qualifications, experiences, and qualities relevant to this position.

The goal is **not** to identify a universally “good” or “bad” candidate. The goal is to help recruiters understand how well the information available about a candidate aligns with the requirements and expectations of a specific role.

This sample job description is provided solely as a common reference for the Talent IQ capstone project and does not represent an actual job posting or the hiring requirements of any specific company

Sample Job Description: Product Owner

Position: Product Owner
Employment Type: Full-time

Role Overview

We are seeking a Product Owner who can help guide the development and improvement of digital products and technology solutions.

The Product Owner works closely with business stakeholders, customers, software engineers, designers, and other partners to understand problems, establish priorities, define requirements, and help teams deliver solutions that create value.

Successful candidates should be comfortable working across technical and business teams, making decisions when information may be incomplete, and clearly communicating priorities and desired outcomes.

What You'll Do

Work with stakeholders and customers to understand business needs, problems, and opportunities.

Translate needs and ideas into clear product requirements and priorities.

Maintain and prioritize a product backlog.

Collaborate with software engineers, designers, analysts, and other team members throughout product development.

Define goals and expected outcomes for product features and improvements.

Gather feedback and use available information to help guide product decisions.

Communicate product priorities, requirements, and decisions to stakeholders and development teams.

Evaluate delivered solutions and identify opportunities for continued improvement.

Basic Qualifications

Candidates should:

Have experience working with technology products, digital solutions, business processes, or product development.

Demonstrate strong written and verbal communication skills.

Be able to understand problems and translate them into clear requirements or potential solutions.

Demonstrate experience collaborating with people across different roles or areas of expertise.

Be able to organize and prioritize competing needs.

Demonstrate sound problem-solving and decision-making skills.

Be comfortable learning about both business needs and technology.

Experiences That May Demonstrate Alignment

Relevant experience may include:

Product ownership or product management

Business analysis

Software or technology projects

Agile product development

Requirements gathering

Customer or user research

Cross-functional project leadership

Process improvement initiatives

Prioritizing product features or project requirements

Working with software engineering or design teams

Candidates may demonstrate these capabilities through professional experience, academic projects, volunteer leadership, personal projects, or other relevant experiences.

Qualities We Value

Product Thinking — The ability to understand problems, users, desired outcomes, and how a product or solution can create value.

Communication — The ability to clearly explain priorities, requirements, decisions, and expectations to different audiences.

Collaboration — The ability to work effectively with technical teams, business partners, customers, and other stakeholders.

Prioritization — The ability to evaluate competing needs and determine where a team should focus its time and resources.

Problem Solving — The ability to investigate problems, consider alternatives, and work toward practical solutions.

Adaptability — The ability to learn, respond to new information, and adjust priorities when circumstances change.

Ownership — A willingness to take responsibility for moving work forward and achieving meaningful outcomes.

Important Context for Talent IQ

For this capstone, assume that candidates being considered for this position should be evaluated in relation to the qualifications, experiences, and qualities described above.

Talent IQ should help recruiters understand how the information available about a candidate aligns with the requirements and expectations of the position.

The goal is **not** to determine whether someone is universally a “good” or “bad” candidate. Candidate qualifications should be considered within the context of the specific position.

This sample job description is provided solely as a common reference for the Talent IQ capstone project and does not represent an actual job posting or the hiring requirements of any specific company.
